

# RISKY PLACES

for crime – seminar series 2021

## Are shopping centers risky places?

Vania Ceccato, Örjan Falk, Pouriya Parsanezhad & Väino Tarandi

School of Architecture and the Built Environment (ABE)

KTH Royal Institute of Technology, Stockholm, Sweden

2nd september 2021

Suggestion for reference:

Ceccato, V. (2016). Are shopping centers risky places?.  
Paper presented in the webinar series “Risky places for crime”,  
Safeplaces network-Nottingham Trent university, 2<sup>nd</sup> September 2021.

**‘Going shopping’ is perceived to be an activity filled with great pleasure (Bamfield, 2012)**

**Shopping centers**

# More than shopping

Shopping centers have evolved from a group of stores to large enclosed malls with an eclectic number of services and functions, including sports, culture and entertainment

The challenge for shopping malls is to create an environment that is at the same time entertaining and safe (Kajalo & Lindblom, 2016)

# Aim & objectives

## Aim

we propose a conceptual model to study crime in shopping centers

We first discuss the nature of crime in a shopping centre in Stockholm, Sweden using data recorded by the security companies and three-dimensional visualization using BIM (Building information modelling) to detect areas that run higher risk of crime

## Objectives

1. to create a BIM model that allows crime mapping and three-D visualisation
2. to detect areas that run higher risk of crime (types of crime/time) using BIM
3. to assess places in the shopping centre that are in most need of intervention through fieldwork inspection and CPTED principles

# The conceptual model

Spaces that are *criminologically relevant* to crime & perceived safety in shopping centres

## 1. *Functional spaces*

## 2. *Public spaces*

## 3. *Transitional areas*

## 4. *Entrances/exits*

## 5. *Immediate surroundings*

# Method & data

Our approach:

**Visualisation of crime records on  
BIM – Building Information Modelling  
&  
Crime Prevention Through Environmental Design**

Data: 17 months of records from security company in the Shopping center, in a total of 5780 records

Tools: Revit 2013, Solibri v. 9.6, in-House tool ***Crime2IFC***

# RESULTS

**Are shopping centers risky places?**

**What, when and where?**

# Which are the most common events?

Jan 2014-May 2015  
N=5768 events

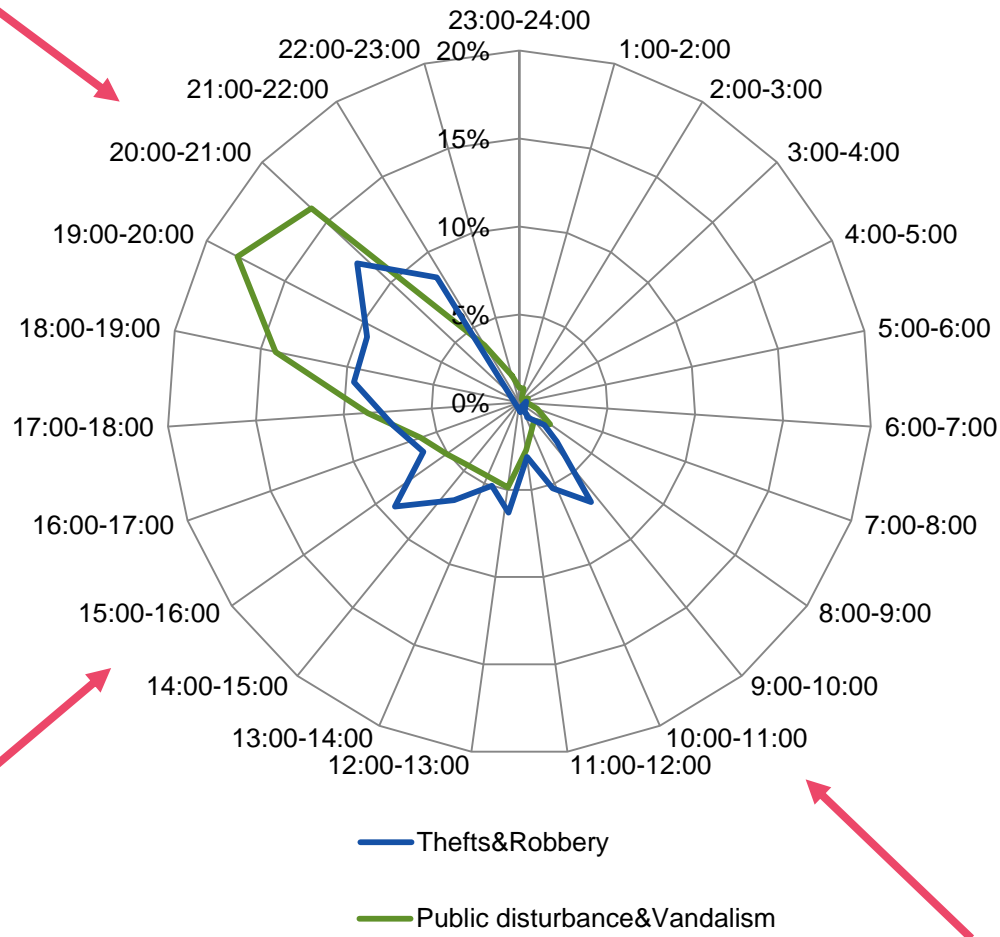

11,2 cases per day

about 1 event per open hour

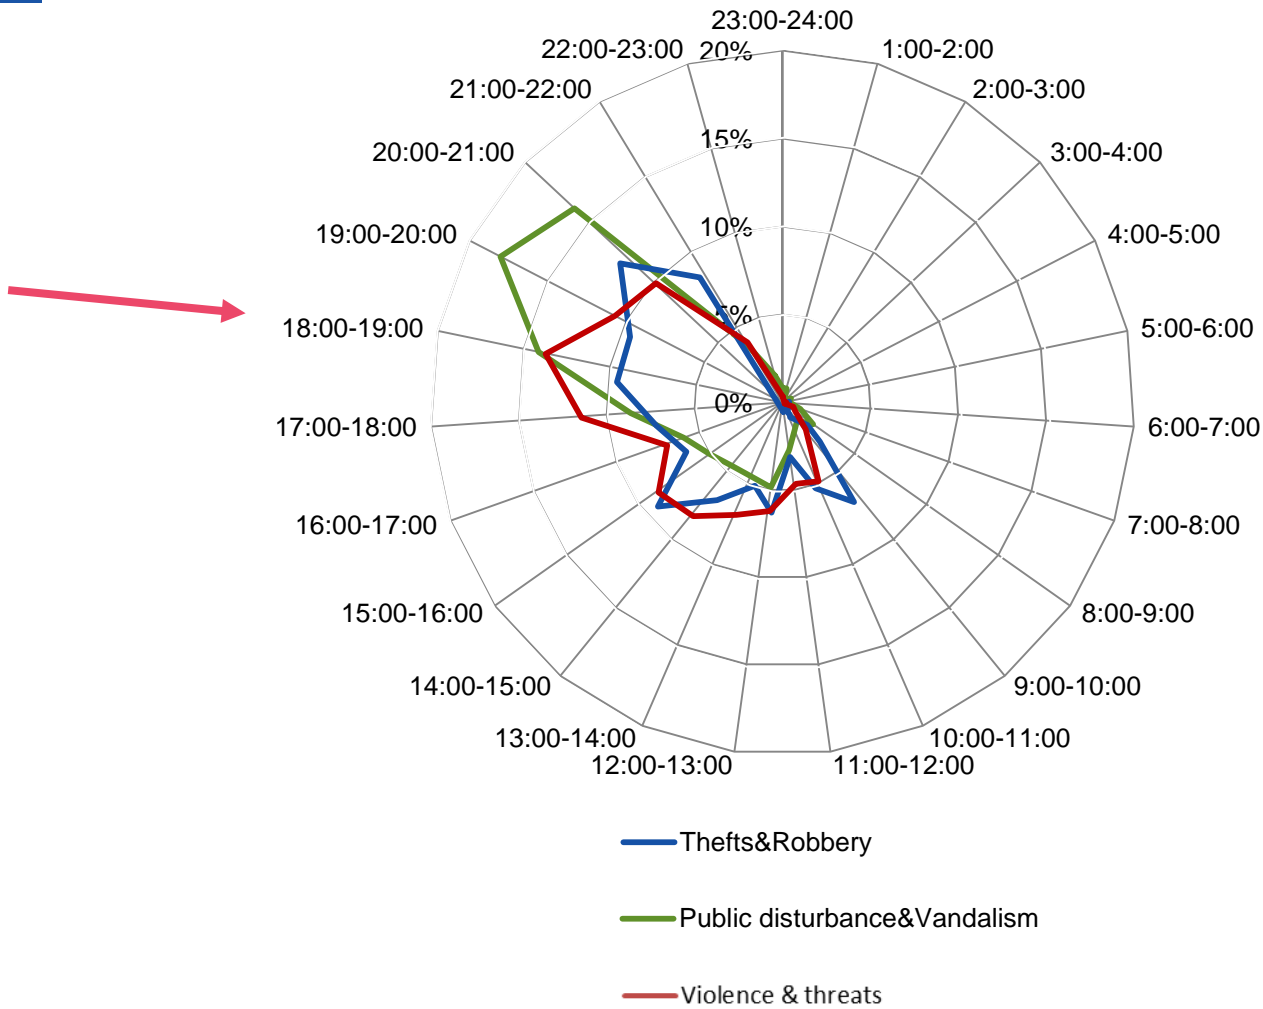

# When do most events happen?

# When do most events happen?

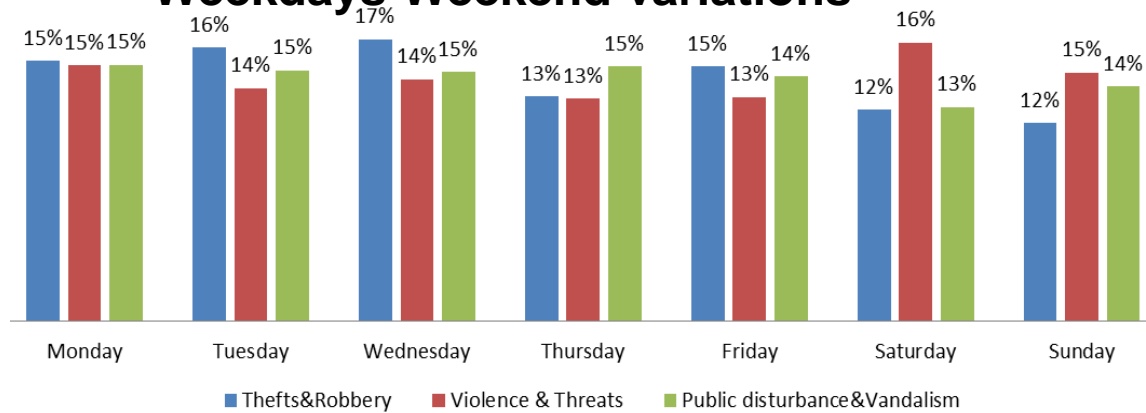

# When do most events happen?

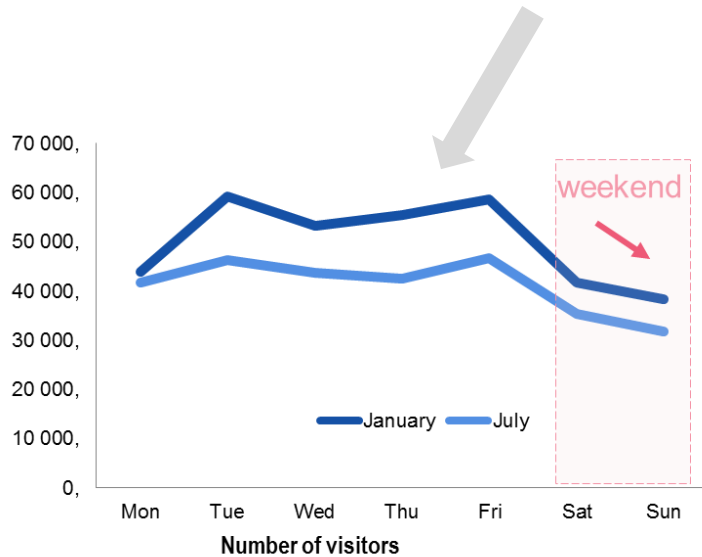

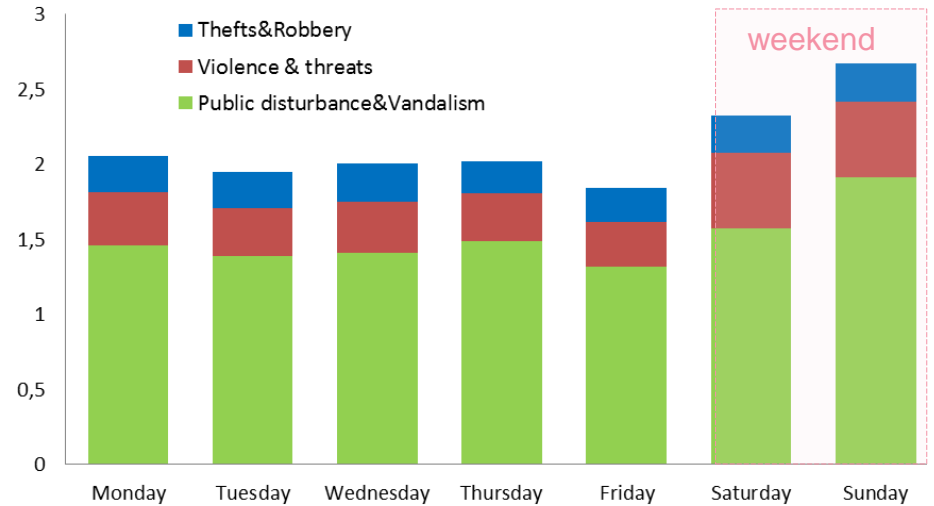

# Weekdays-Weekend variations

## Days of the week

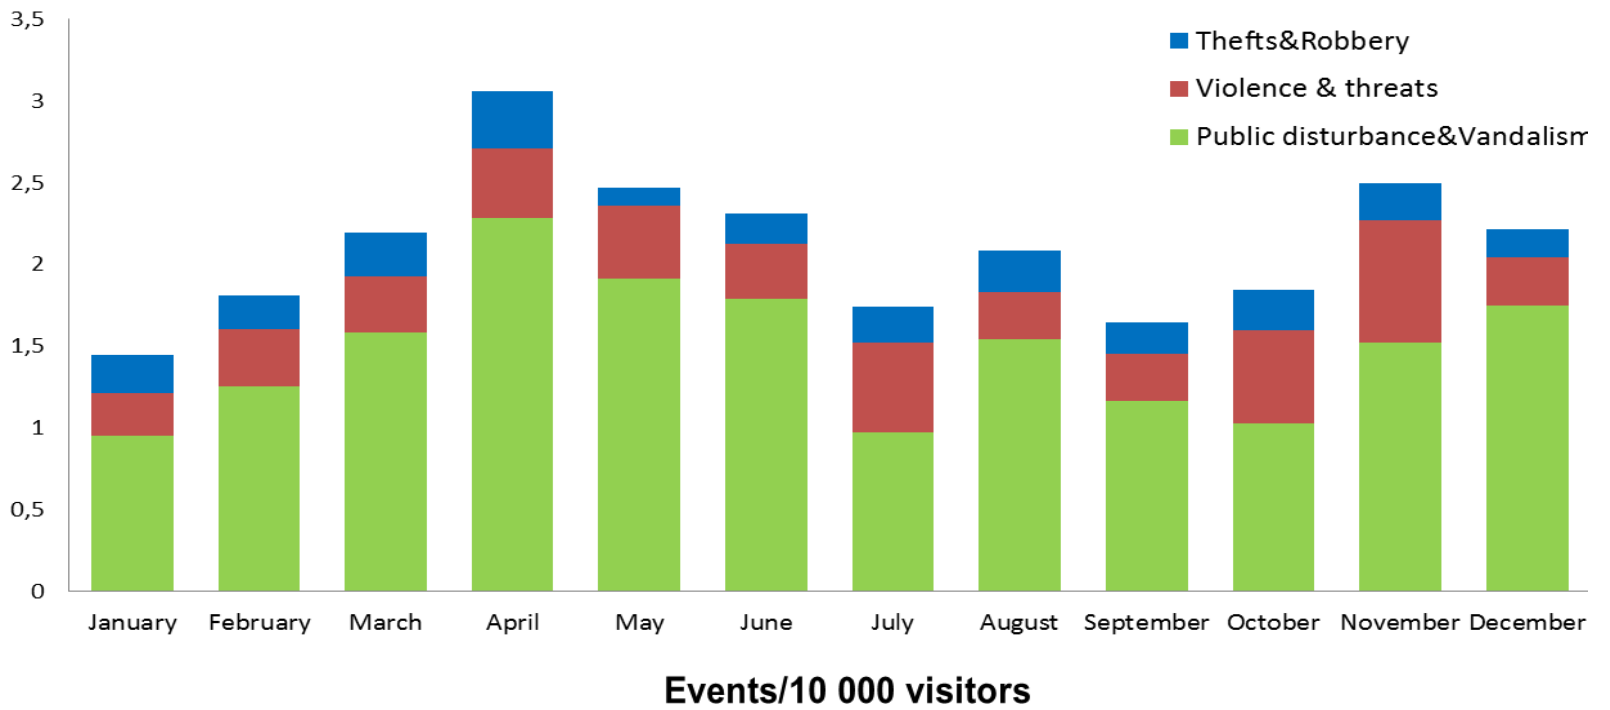

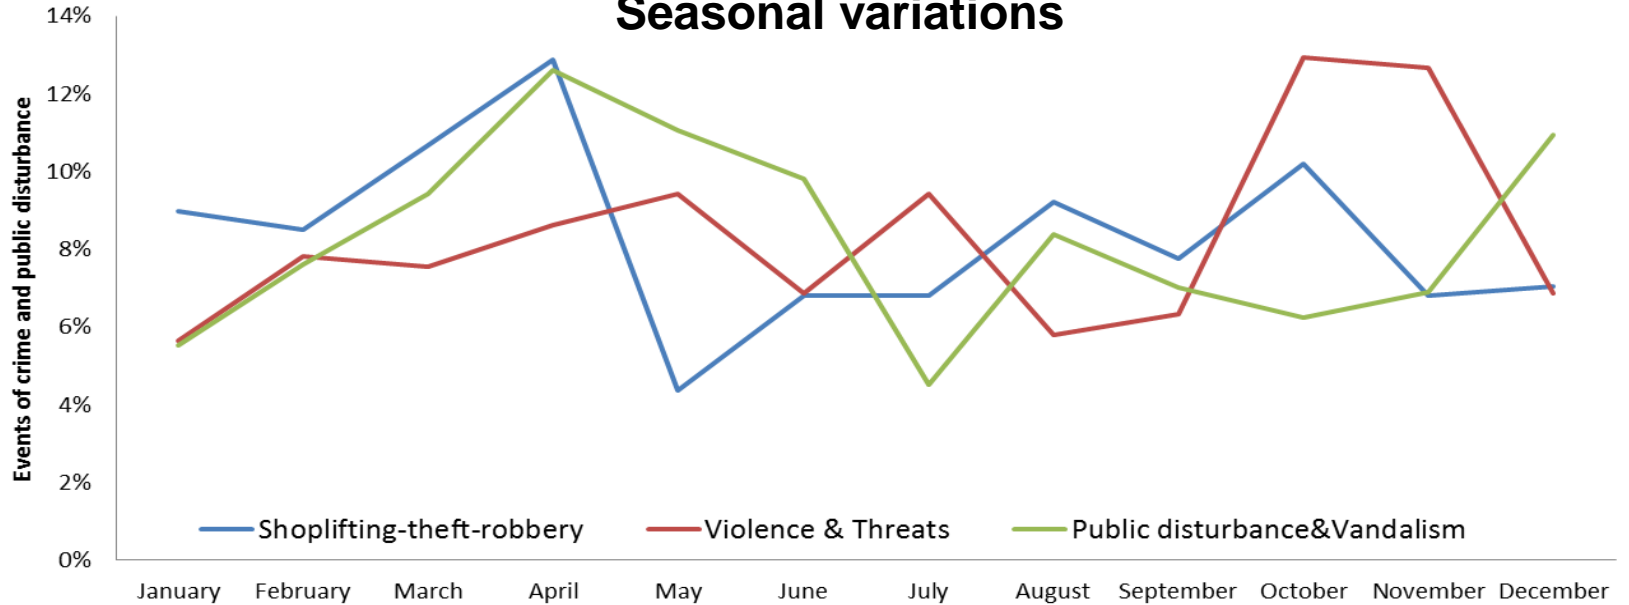

Average 358 000 visitors a week (trading hours, 2014)

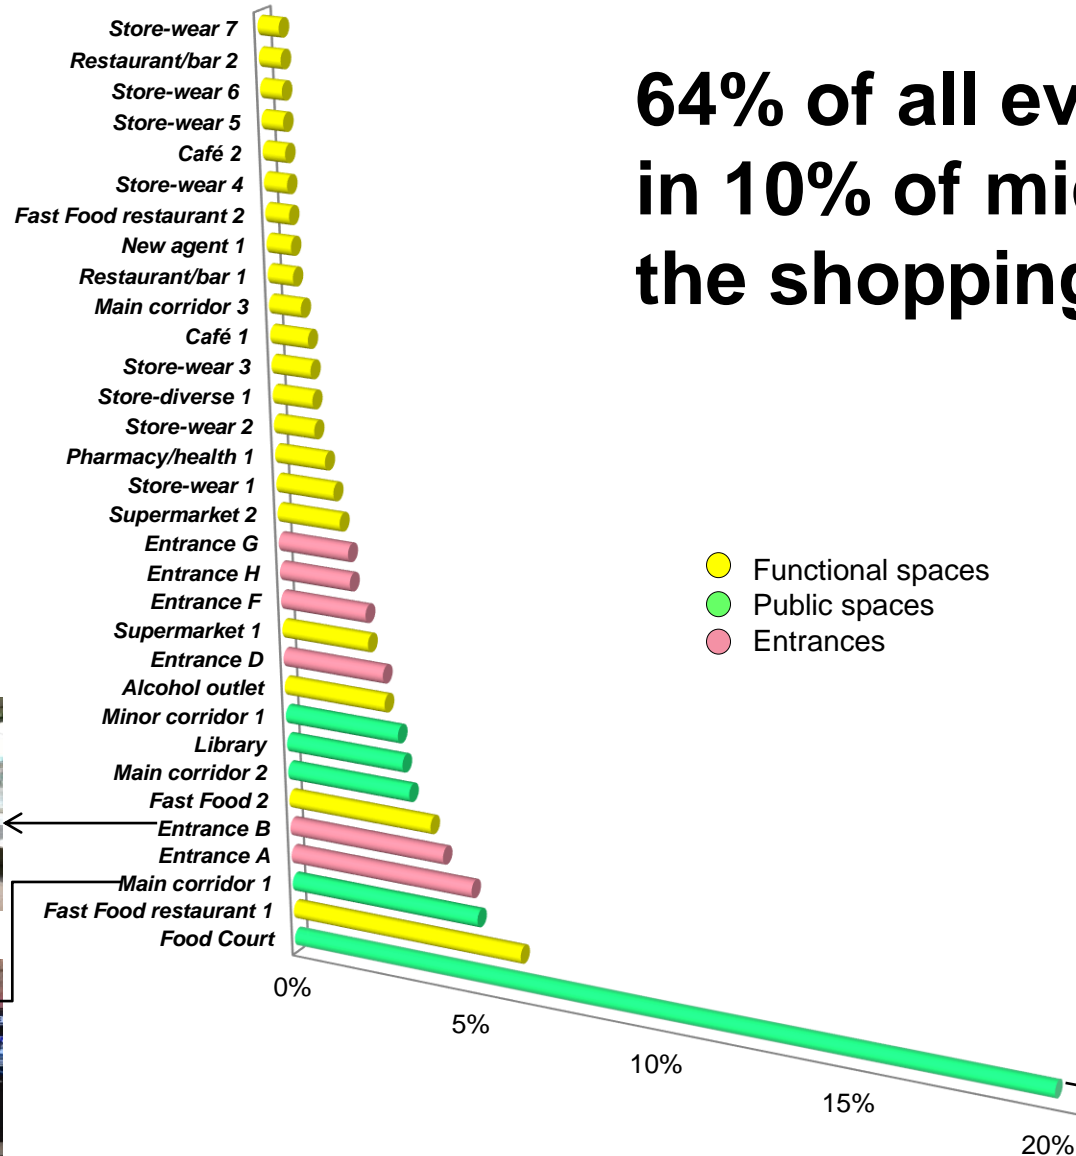

Events/10 000 visitors

# Seasonal variations

# Where do most events happen?

**64% of all events happen in 10% of micro-places in the shopping center**

- Functional spaces
- Public spaces
- Entrances

# Meso-level: Main retail floor

Main corridor

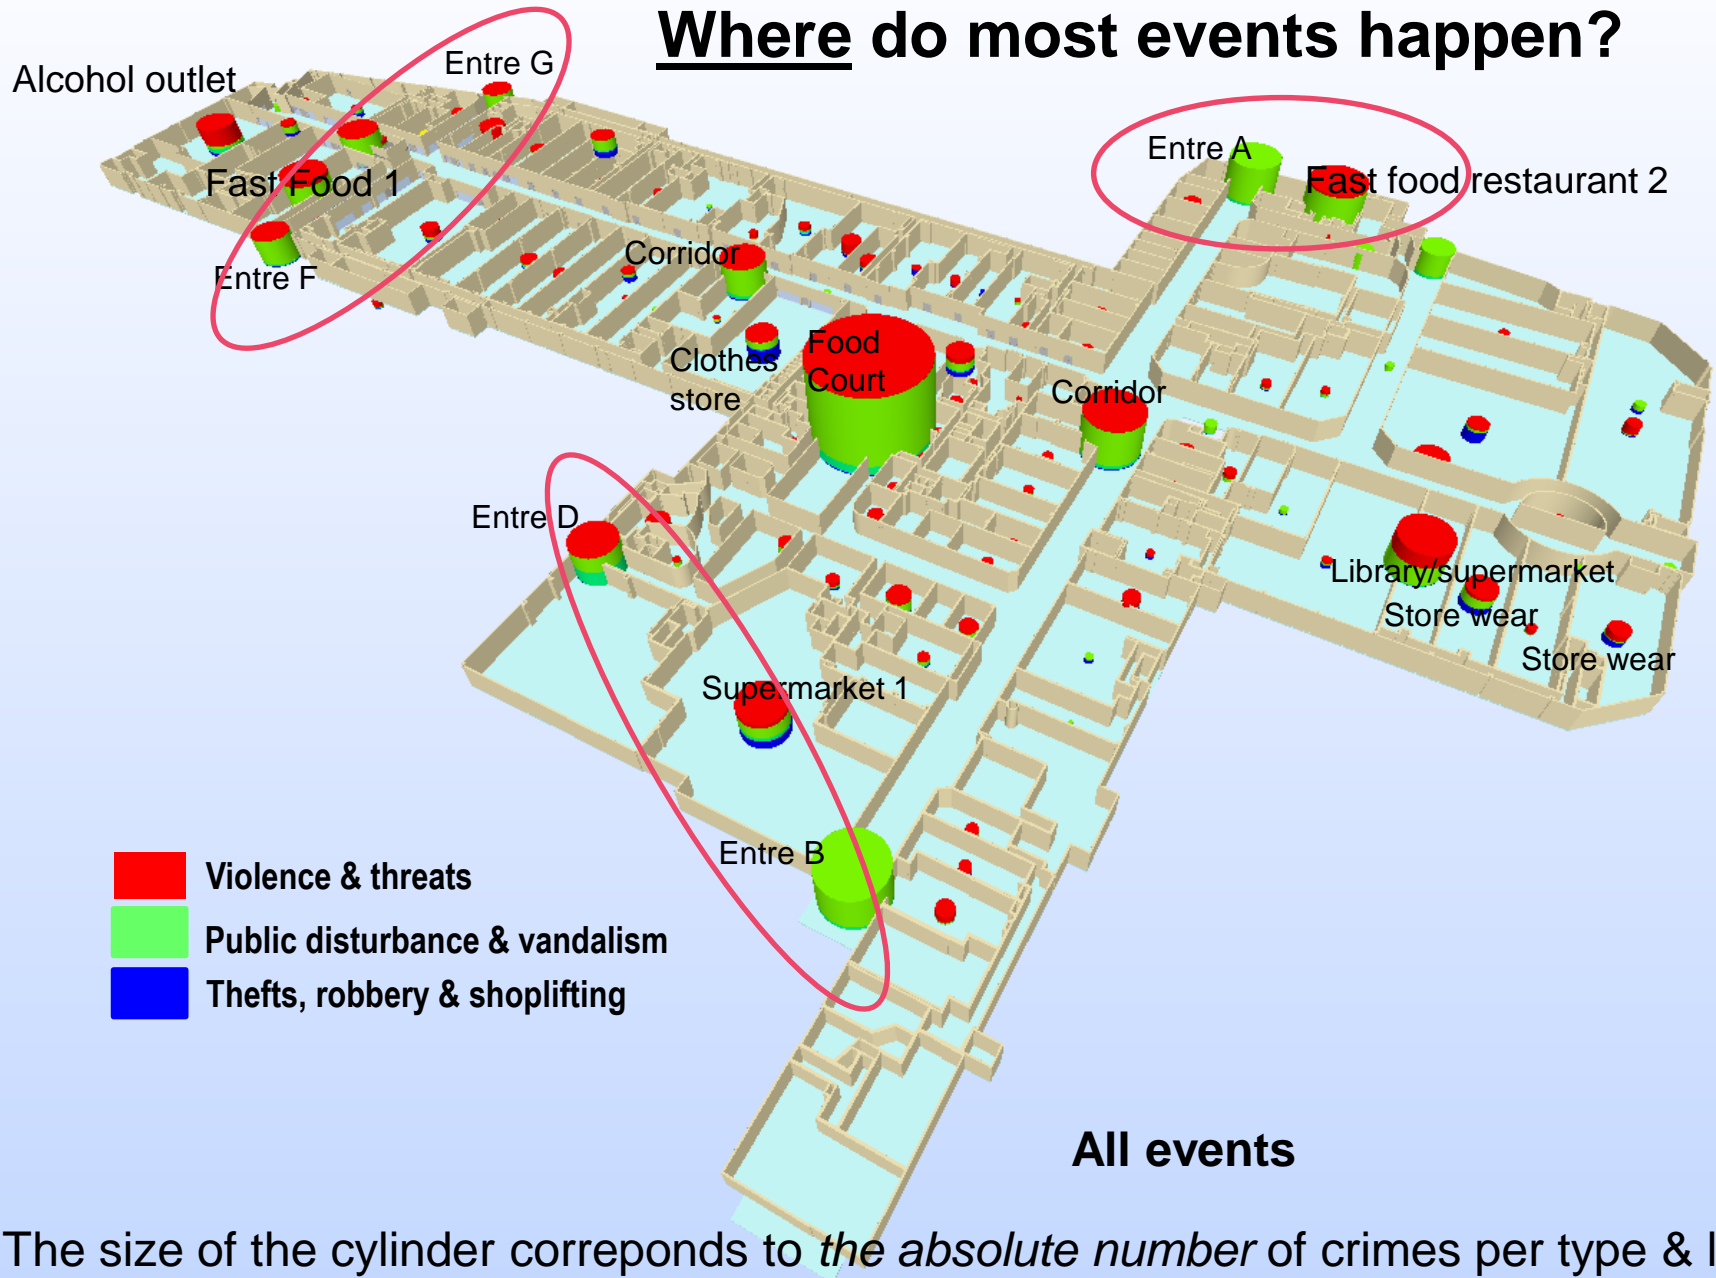

Food court

entrance

# Where do most events happen?

The size of the cylinder corresponds to *the absolute number* of crimes per type & location

# The most common crime type per location

- Violence & threats
- Public disturbance & vandalism
- Thefts, robbery & shoplifting

There is a crime specialisation by place type

The size of the cylinder corresponds to *the relative number of crimes per type & location*

# Crime prevention requires crime profiles in time & space

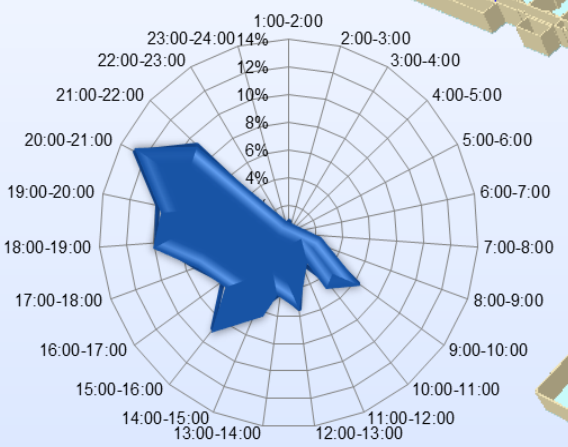

- **By crime type**

# Theft, robbery & shoplifting

16%

 Theft, robbery & shoplifting

Hours of the day

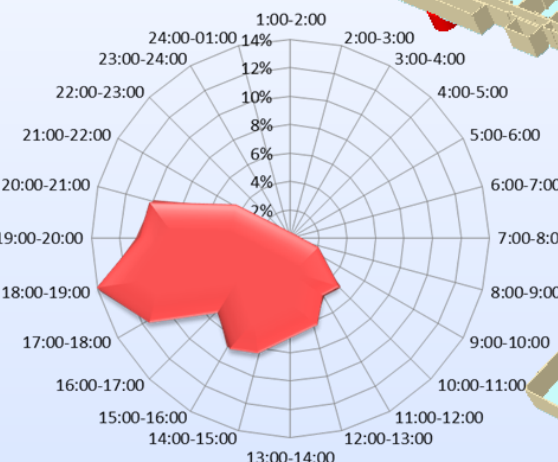

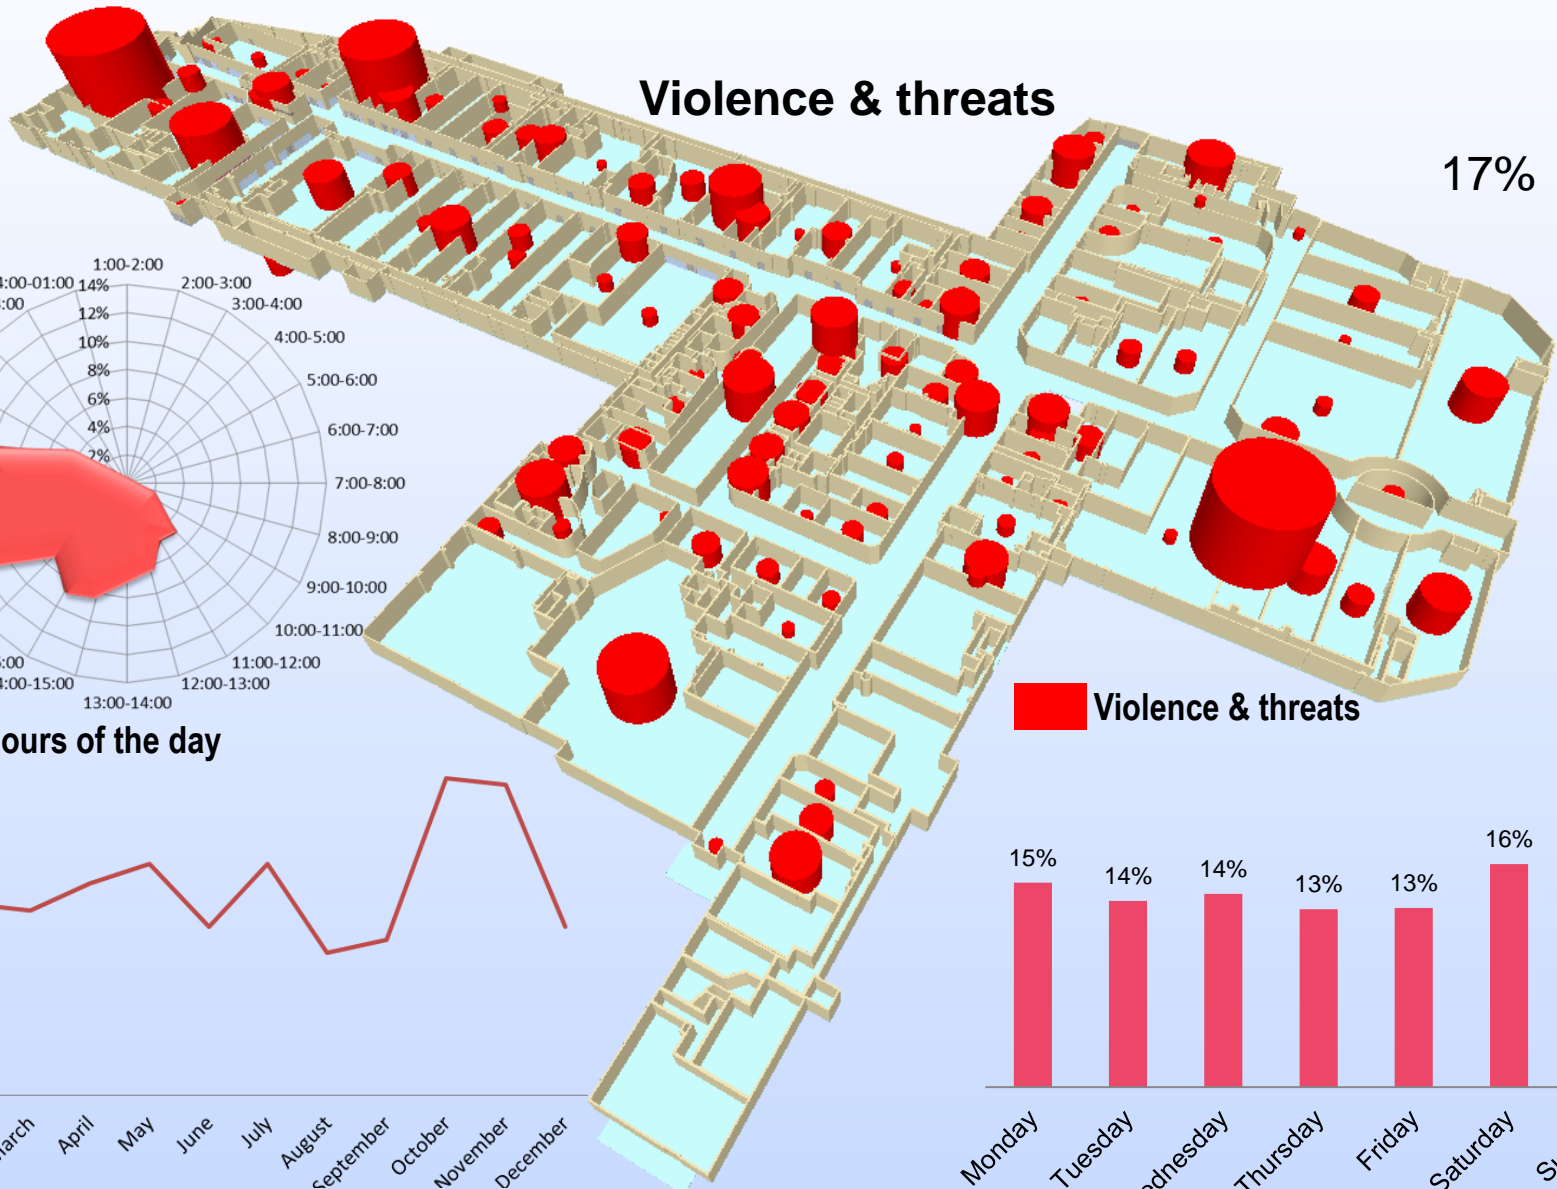

Months of the year

Days of the week

# Violence & threats

17%

## Hours of the day

## Months of the year

## Days of the week

# Crime specialisation

- **By time**

# Weekends

- Violence & threats
- Public disturbance & vandalism
- Thefts, robbery & shoplifting

# All week

-  Violence & threats
-  Public disturbance & vandalism
-  Thefts, robbery & shoplifting

# Are shopping centers risky places?

**64% of all events happen in 10% of micro-places in the shopping center**

- **The food court**
- **Entrance(s)**
- **Particular premisses**

**Transmission Management**

— handlers  
Controllers,  
guardians

# IMPLICATIONS TO PRACTICE

There are 3 types of places most in need

**Public spaces**

**Entrances**

**Functional spaces**

- **The food court**
- **Entrance(s)**
- **Particular premisses**

# The food court

More than formal social control, security of the food court can be improved by dealing with issues of design ----- **permeability and territoriality**

# Stores

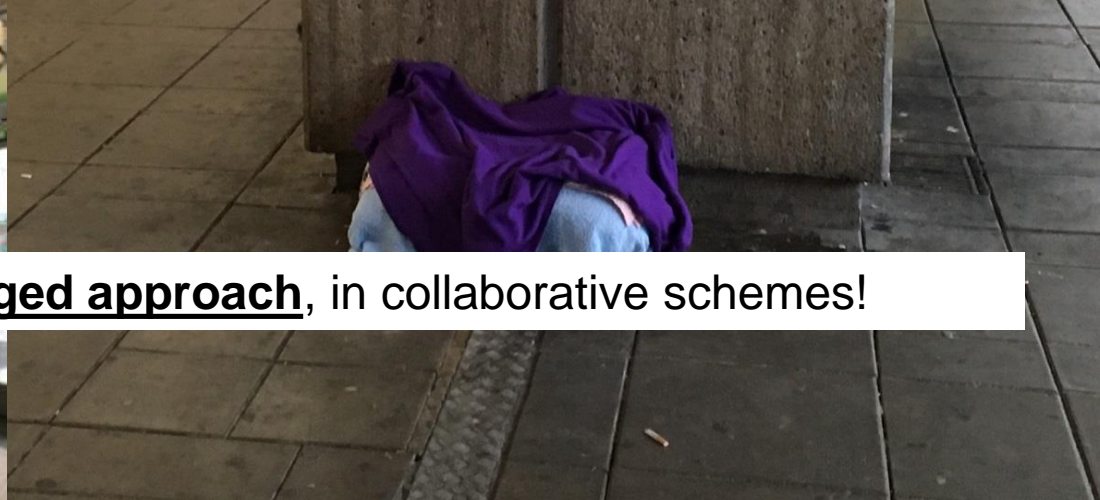

**Crime prevention measures have to be business specific!**

# Entrances/exits

Some problems require a **multi-pronged approach**, in collaborative schemes!

# Safety perceptions in the shopping center

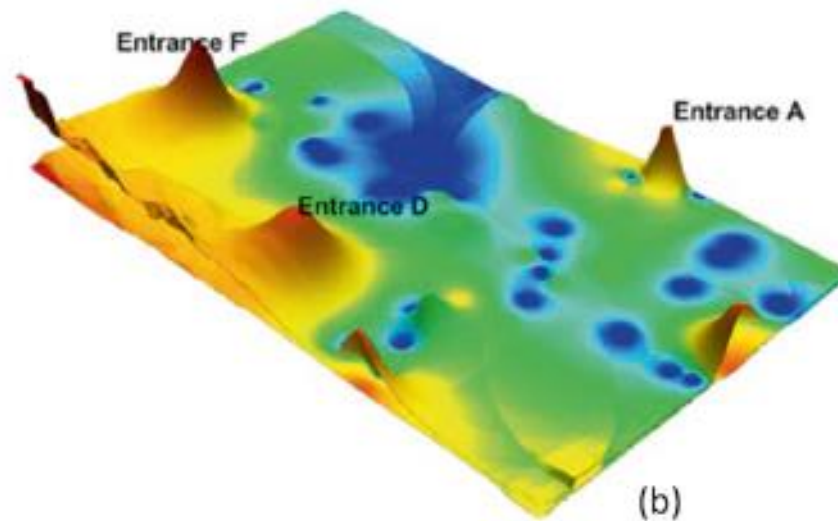

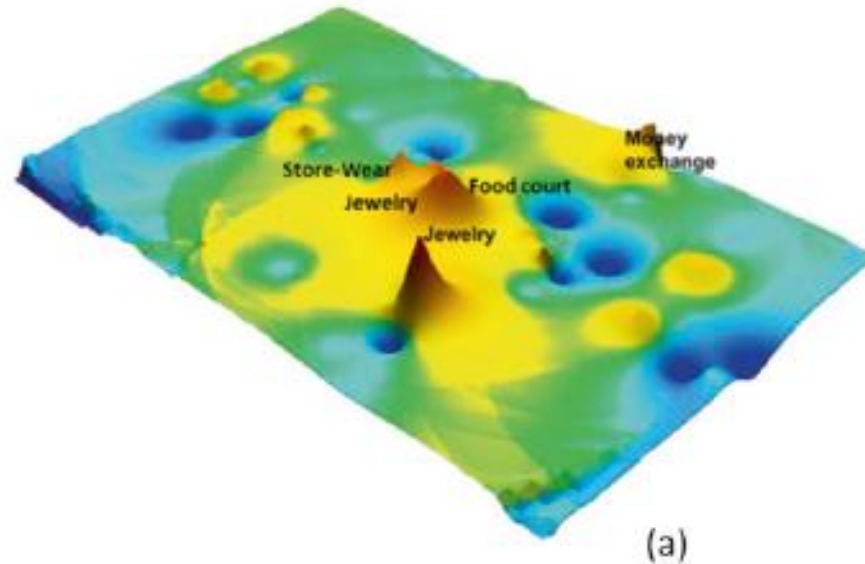

Fig. 9.3 Representation of (a) where shopping visitors witnessed crime and (b) where they felt unsafe in the shopping mall

*In the shopping mall ...*

*young people may want a central place to gather,  
while the old want freedom from noise, jostling and fear,  
one shop may wish to sell fast food, while its neighbours may not  
wish to be buried beneath boxes of half-eaten chicken legs.*

(Ekblom, 1995, p. 45)

# Thank you!
